

## INKJET COMPATIBLE BOTTLE LABELS

**INK-203364**

### TEXTURED WATERPROOF INKJET COMPATIBLE BOTTLE LABELS

Many wine bottles are best served chilled. Labfax's self adhesive labels have a special waterproof coating making them suitable for the fridge and freezer meaning these labels are a great choice if the label needs to withstand a variety of temperatures including an ice bucket. As well as having a textured finish they are suitable for the Epson ColorWorks printer range allowing printing on demand in full colour.

#### Storage conditions

18-23°C, 50-55% RH, avoid UV exposure, avoid close exposure to heat sources, keep from freezing, do not stack higher than 50cm.

#### Application conditions

Apply on dry, clean (e.g. no dust, oil, etc) surfaces.

#### End user conditions

It is advised to do preliminary printing trials, to evaluate the water resistance and to test the compatibility with pigment based inks.

For optimal lasting quality prints made with dye based inks, frequent and/or long lasting exposure to high humidity levels (e.g. above 75% RH) should be avoided if possible.
